

Prototype Tumbler for Help People with Disabilities

This Prototype Tumbler is a prototype product for help people with disabilities, i.e. blind. We make this tumbler at the request of a customer who had the idea to facilitate the blind in making tea, coffee, and so forth.

Based on the ideas and the customer demand, we designed a way to create a prototype that works well.

Differentiation of this tumbler is a timer on the lid to determine the length of cooking water, tea infuser, water indicator Braille that can go up and down according to the volume of water, self-steering function (stirred by pressing the buttons) and the heating function in tumbler so that blind people do not to fear when poured hot water (water is heated in a tumbler).

This product is one that proves the advantages we (PT. Design & Technics Indonesia) are providing solutions according to customer demand.
